

TIP FOR IMPROVING WEBINAR SOUND

* * *

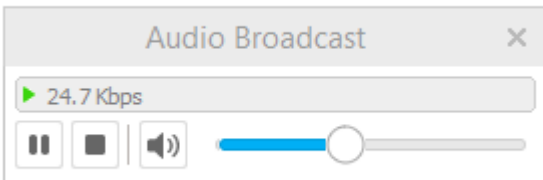

ADI is in the process of upgrading its presentation equipment. While we work on improving sound transmission from our end, you may find the following tip helpful, especially if you have older speakers.

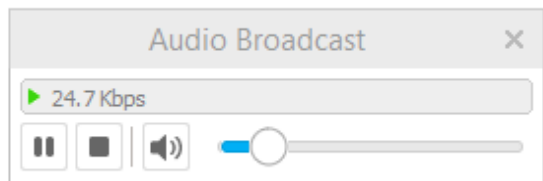

When you first log on to an ADI WebEx event, the Audio Broadcast pop-up box appears at the top of the screen.

The broadcast volume automatically defaults to the highest setting. This may result in distortion and poor quality sound as the broadcast is transmitted to your speakers.

The broadcast volume can be adjusted. If you lower the volume setting of the audio broadcast, you will need to increase the volume setting on your physical speakers.

We found that a very low broadcast volume gave us the best results. Obviously, this may not be the case for different equipment. But it may be worth a try.
